Our Sustainability Commitment

———— 2022 and Beyond ————

At Carton Service, we care deeply about the future of our planet. It is why we've integrated sustainability into our corporate strategy and are committed to advancing the circular economy - in both our operations and the products we make.

The paper-based packaging we produce is derived from renewable raw materials and, when managed sustainably, forests can serve as a carbon sink to help address climate change and the loss of biodiversity.

Compared to other materials, Carton Service's packaging has proven to offer better performance, printing, and image quality at compelling economic rates. Our customers recognize the sustainable attributes of our products and we routinely work with them to meet their own sustainability targets, such as designing packaging to reduce material waste, increasing the use of recycled content, or achieving FSC® certification (FSC-C182277). Cartons can be made with FSC certified board upon request.

In our operations, we train all associates on our ESG efforts, such as ways to reduce energy, water, and material waste. We have also developed waste management strategies across our offices and production facilities to ensure as much material as possible is recycled or composted.

By 2030, Carton Service intends to reduce our greenhouse gas emissions by 42%, in line with the goals of the Paris Climate Agreement.

Carton Service Knows About Eco-Friendly Packaging

In business since 1926, Carton Service has met a myriad of packaging challenges. Creating a circular economy (using materials that are both renewable and recyclable) has become our focus. We do this in several ways:

1. Providing direct contact food cartons made from paperboard – with or without windows. Perfect for dry contents like granola and pet food. Also an innovative choice for semi-solid food like coleslaw and potato salad.
2. Providing liquid filled gable-top cartons made from paperboard – with or without caps. Perfect for water, coffee, tea, juice, dairy products, plant based milks, soap, adult beverages, detergents, and more.
3. Providing gable-top cartons in a variety of shapes, sizes and quantities that can be used for things like snacks and sweets.
4. Providing laminated chipboard cartons that mimic corrugate for sturdy containers for heavier products using minimal paperboard.
5. Working alongside new suppliers, we are able to source new recyclable materials that can really reduce packaging environmental impact.

Sustainable Packaging Solutions

Carton Service paperboard products are a sustainable packaging solution
