REDUCTION OF CARBON FOOTPRINT

By 2030, Carton Service intends to reduce our green-house gas emissions by 42%, in line with the goals of the Paris Climate Agreement using science-based targets in line with the 1.5 degree scenario.

Progress has been made from our base year of 2021. 2025 electric use is down 15.65% from our base year and down 12.9% from 2024. All

2025 energy is down 9% from our base year and down 5.4% from 2024.

Our energy use does vary with our production mix, but we are on track with a reduction in our Green House Gas Emissions with an annual decrease of 2.51%.

*Our 2025 Scope 1 and 2 emissions were verified with Keramida, a WBE-Certified leading provider of sustainability & ESG, climate/GHG, environmental, health & safety consulting and engineering services.

CARBON FOOTPRINT PAPERBOARD VS OTHER PACKAGING

Environmental LCA Show Significantly Smaller Impact of Paper

Carton Service Paper Carton

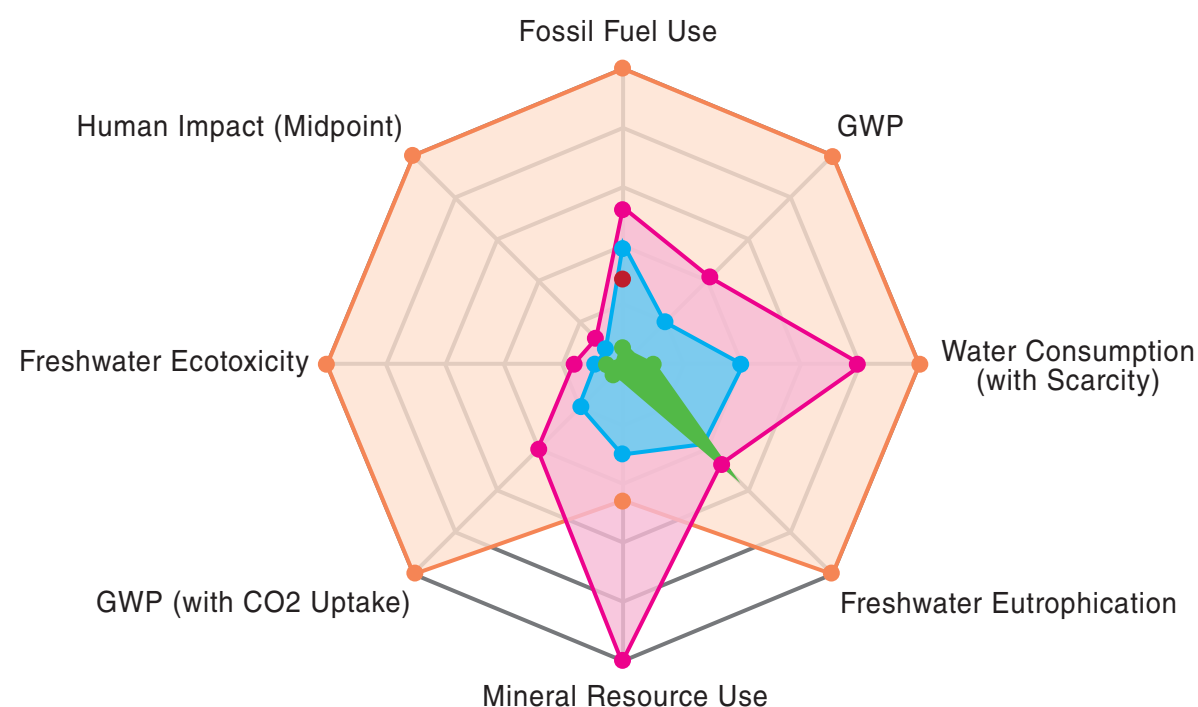

Plastic Container

Aluminum Container

Glass Container

For this carbon footprint analysis, Carton Service CSI, LLC used the LCA tool, EcolImpact COMPASS data version 2024.1 from Trayak to measure the environmental impacts of various packaging materials. This analysis provides a cradle to grave approach of paper versus plastic, aluminum and glass.

PATENTS

- Seven US Design & Utility Patents
- Three Canadian Design Patents
- Three Mexican Design Patents

Each patent relates to more sustainable packaging choices. More patents coming in the near future!

COMMUNITY INVOLVEMENT

Carton Service cares about the communities in which our associates live and play. Recent investments include the plaza at Black Fork Commons in Shelby, Ohio and the Whippet Athletic Complex, also in Shelby, Ohio.
